

Grillo

AGRIGARDEN MACHINES

G45

The G45 is a compact walking tractor ideal for working in narrow spaces both in horticulture or gardens. **Perfectly balanced**, it is fitted with a gearbox in oil bath and a forward and reverse gear. Due to several devices it is equipped with, this walking tractor can be **safely used by the inexperienced too!** The **contra-rotating tines** till even the hardest soil in spite of it's compact dimensions and light weight. The tines and wheels move in opposite direction allowing the walking tractor to perfectly adhere to the ground enabling the user to work with minimum effort. **There is no need to push down hard on the handlebar**, just allow the walking tractor to move forwards under it's power.

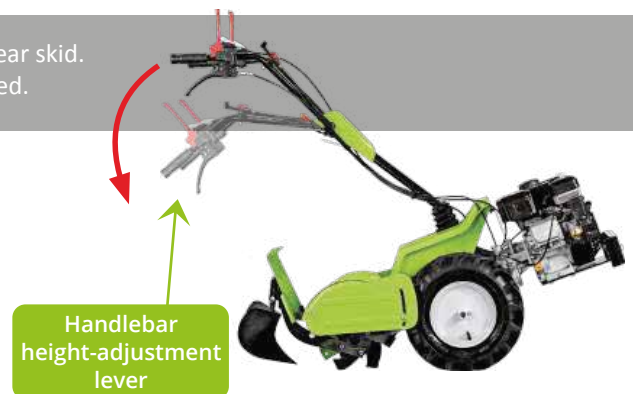

The G45 comes with the **GR 200 Grillo engine**, and is fitted with a robust engine guard. The tiller is 50cm and it's tempered steel tines have a diameter of 26cm. **Tiller and wheels move in the opposite direction to each other** allowing the walking tractor to adhere even to the most demanding soil. The tiller is fitted with protective shear pins.

Tilling Depth can be changed into two different positions by adjusting the rear skid. However, a greater till depth can be achieved by removing the skid if required.

Forward gear with **active coupling**: when the lever is released the wheels stop immediately whilst the engine keeps on running. Forward gear and PTO are engaged independently from each other. A **safety device** prevents the tiller from being activated when reverse gear is engaged.

The **furrower** can be mounted behind the tiller to obtain perfect furrows for seeding or irrigation.
