

Grillo

AGRIGARDEN MACHINES

G55

The G55 is a walking tractor suitable for working in medium-sized areas. It is equipped with a four-speed gearbox in oil-bath with **two forward and two reverse gears**. This comfortable and safe walking tractor can be used with **several rear or front-mounted attachments**. It's **handlebar can be reversed** through 180° via a lever. The attachments are connected through a **quick coupling** (standard feature) with no need to use tools. A ploughing kit for this model is also available. It contains large diameter wheels, adjustable extensions, 180° turn-wrest plough and weights. A greater stability on slopes can be achieved by widening the wheel track from 12 up to 24cm using the appropriate Grillo wheel extensions.

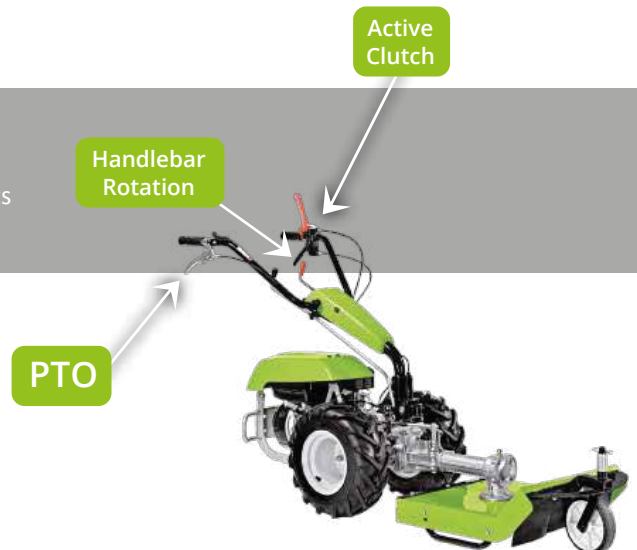

The G55 can be fitted with either 3000 Kohler or Honda GX 160 petrol engine. All come with a strong front bumper. The tiller is 58cm and adjustable, the tempered steel tines have a diameter of 26cm. Thanks to its 'all enveloping hood' the soil is kept inside and finely tilled.

Active clutch: when the lever is released, the wheels and the attachment stop immediately whilst the engine keeps on running. Forward gear and PTO are engaged independently from each other. A **safety device** prevents the tiller from being activated when reverse gear is engaged.

The tilling depth is adjusted using the comfortable outer lever. To achieve better results adjust the central knife into three different positions; for hard, medium or soft/sandy soil.

The G55 is equipped with a **quick coupling as standard**, allowing you to easily and rapidly attach implements. The attachment is locked to the walking tractor by turning a lever, no mounting bolts are needed.
